

PEBBLES PROJECT HEALTH CLINIC

Farmworker communities often have difficulty accessing clinics due to the remote locations of the farms and lack of public transportation. The Pebbles clinic opened its doors in 2014 and provides primary healthcare, wellness, and dental services to Pebbles beneficiaries, their families and the community.

Pebbles is extending the services of its health clinic beyond the farmworkers and their children on the farms it supports, to now include the greater Winelands community. Whilst preference will be given to clients from disadvantaged areas with poor access to healthcare and/or local businesses that might want to pay for their workers to access this service, anyone can make an appointment at the clinic.

Transport is provided (at an additional cost) and the clinic operates on an appointment system to reduce waiting times.
